Intalio Central Login Service Integration

>= version F1.2.15

- Intalio CLS - Configuration

# Intalio CLS - Configuration

Description

Intalio Central Login Service

Configuration

SystemConfig.json

```
{
  "SystemUrl": "XSYSTEM_URLX",
  [...]
  "IntalioCLS": {
    "enabled": true,
    "url": "https://localhost:8081/"
```
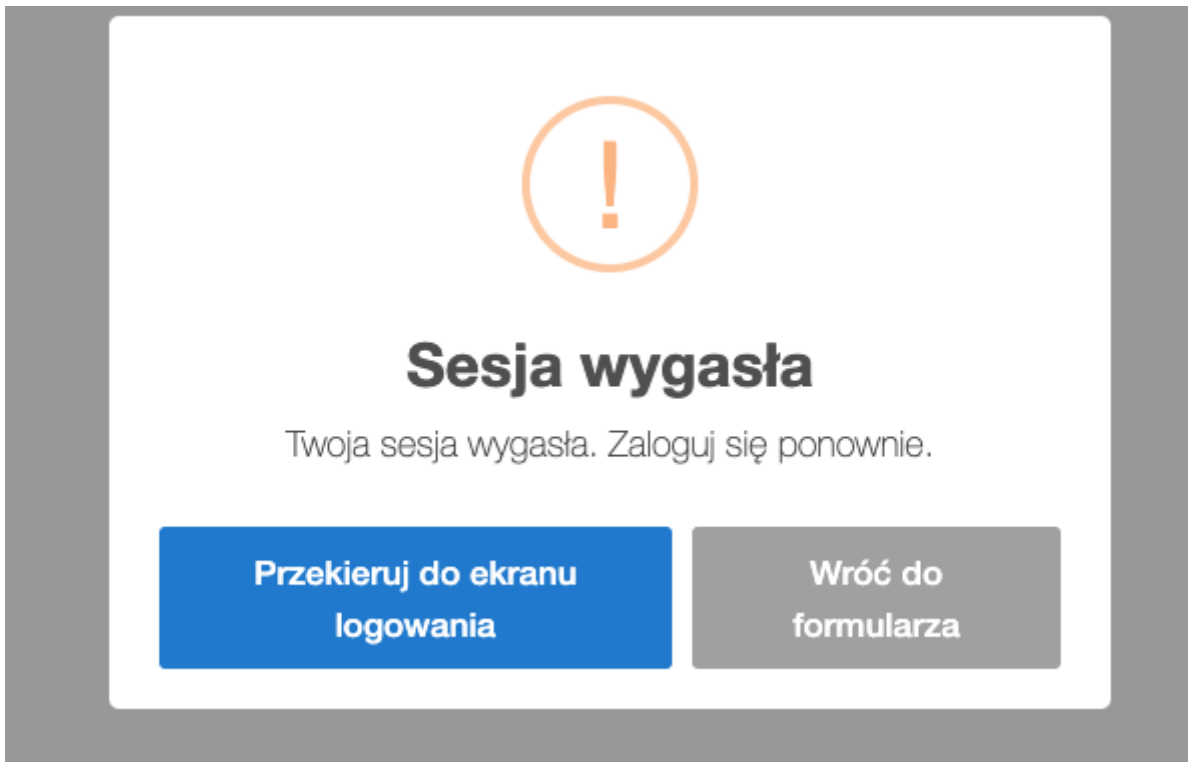

```
    }
  }
```

`IntalioCLS` - *Container of Intalio CLS configuration*

`enabled` - *The system is active*

`url` - *Link to Intalio Central Login Service*

Session verification

check_session_id (*form param)*

If this parameter is active (and Intalio CLS is active), the system will automatically check the validity of the user's session every 5 seconds. If the session expires, a popup will be displayed with information and an option to go to Intalio CLS.

translations

The language configuration for the popup is set in the translations of the form.
The available variables are:

```
"Alert -Session-Expired- title": "Session expired",
"Alert -Session-Expired- text": "Your session has expired. Please log in.",
```

```
"Alert -Session-Expired- confirmButtonText": "Redirect to login screen",
"Alert -Session-Expired- cancelButtonText": "Show form"
```

Attention!

The session verification mechanism only works when **"headless"** mode is disabled!
