Installation

Unpack installer archive file *.tar.gz in /var/tmp/ (as root):

```
mv /root/ZI-ADPassword-x.x.tar.gz /var/tmp/  
cd /var/tmp/  
tar xzvf ZI-ADPassword-x.x.tar.gz  
cd /var/tmp/ZI-ADPassword-x.x
```

Run installation script (as root):

```
perl ZI-Installer --instal-deps
```

At the beginning required perl packages will be installed:

Answer: Y

Answer: Y

Enter login and password received with the license.

Choose: 1

Choose: Y

Choose: Y

If You answer Y, the zimbra mailbox will be restarted

After the mailbox restart, zimlet should be installed. To check it, login into the Panel Admin in Your ZCS Server and see Panel Administrator > Migration and tool > ZI-License. There should be informations about granted licenses.

Zimbra configuration

Prerequisites

The goal of this document is to configure Active Directory authentication for domain **addomain.example.com** in ZCS Zimbra and integrate it with ZI-ADPassword.

The configuration of AD authentication of the domain is according to the https://wiki.zimbra.com/wiki/Configure_authentication_with_Active_Directory .

Information needed:

- Active Directory administrator DN and passwords
- Active Directory address

Domain configuration

At beginning create the domain **addomain.example.com**:

```
zmprov cd addomain.example.com
```

We configure Active Directory authentication:

```
zmprov md adzimbrasdemo.int.intalio.pl zimbraAuthLdapBindDn '%u@addomain.local'
zmprov md adzimbrasdemo.int.intalio.pl zimbraAuthLdapSearchBase
'CN=Users,DC=addomain,DC=local'
zmprov md adzimbrasdemo.int.intalio.pl zimbraAuthLdapSearchBindDn
'CN=Administrator,CN=Users,DC=addomain,DC=local'
zmprov md adzimbrasdemo.int.intalio.pl zimbraAuthLdapSearchBindPassword
'Administrator_password_in_AD'
zmprov md adzimbrasdemo.int.intalio.pl zimbraAuthLdapSearchFilter '(samaccountname=%u)'
zmprov md adzimbrasdemo.int.intalio.pl zimbraAuthLdapURL 'ldaps://ad.addomain.local:636'
```

where:

- zimbraAuthLdapBindDn - LDAP bind dn for ldap auth mech
- zimbraAuthLdapSearchBase - LDAP search base for ldap auth mech
- zimbraAuthLdapSearchBindDn - LDAP search bind dn for ldap auth mech
- zimbraAuthLdapSearchBindPassword - LDAP search bind password for ldap auth mech
- zimbraAuthLdapSearchFilter - LDAP search filter for ldap auth mech
- zimbraAuthLdapURL - LDAP URL for ldap auth mech

Zimlet configuration

In this step we configure custom authentication for addomain.example.com:

```
zmpov md addomain.example.com zimbraAuthMech 'custom:ZIADPassword'  
zmpov md addomain.example.com zimbraPasswordChangeListener ZIADChangePassword
```

After this ZI-ADPassword takes control over the authentication process and password changing requests.

Install Active Directory server certificate on every mailbox:

```
/opt/zimbra/common/bin/keytool -import -alias adserver -keystore  
/opt/zimbra/common/etc/java/cacerts -trustcacerts -file /tmp/ad_cert.crt
```

Restart all mailboxes:

```
zmmailboxctl restart
```
