User quick guide

Introduction

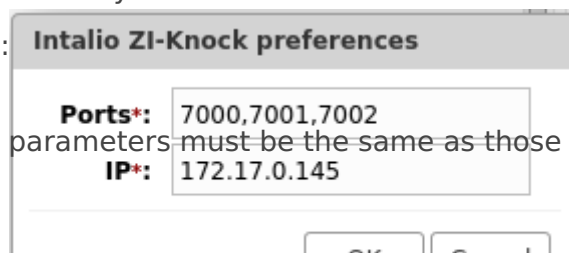

From user account, there are two types of possible actions:

- set zimlet preferences: ports and IP
- activating configured port knocking action

Configuration

Configuration of the ZI-Knock zimlet can be evoked by double click on the ZI-Knock zimlet. After that the configuration window will be opened:

In this window user can set ports and IP. This parameters must be the same as those in the /etc/knockd.conf on proxy server.

Changes of the ZI-Knock zimlet parameters require mailbox restart.

Zimlet usage

To initiate port knocking sequence, user must click once on the ZI-Knock zimlet icon on the web panel of the ZCS Zimbra Web client. After this a dialog window will appear. After the knocking sequence will be finished, user will be able to select "Go to the admin panel" button.
