# User quick guide

Introduction

From user account, there are to types of possible actions:

- set zimlet preferences: ports and IP
- activating configured port knocking action

Configuration

Configuration of the ZI-Knock zimlet can be evoked by double click on the ZI-Knock zimlet. After that the configuration window will be opened:

In this window user can set ports and IP. This parameters must be the same as those in the /etc/knockd.conf on proxy server.
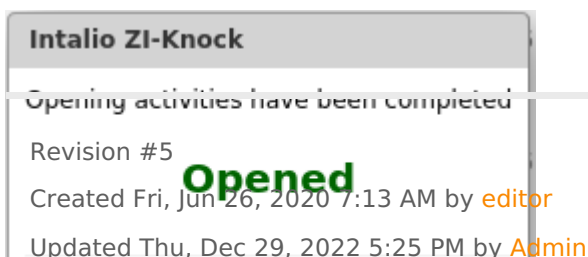

Intalio ZI-Knock preferences

Ports*: 7000,7001,7002

IP*: 172.17.0.145

> Changes of the ZI-Knock zimlet parameters require mailbox restart.

Zimlet usage

To initiate port knocking sequence, user must click once on the ZI-Knock zimlet icon on the web panel of the ZCS Zimbra Web client. After this a dialog window will appeare. After the knocking seqeunce will be finished, user will be able to select "Go to the admin panel" button.
