

Configuration

Log in to the Zimbra Administration Console. The ZI-SecurityIncident configuration panel is available on **Main Page -> Migration and tools -> ZI-SecurityIncident**

The screenshot shows the Zimbra Administration Console interface. The left sidebar contains a menu with options: Home, Tools and Migration, Downloads, Account Migration, Software Updates, Client Upload, ZI-Piler, ZI-LicenseSystem, and ZI-SecurityIncident (which is currently selected). The main content area is titled 'Home - Tools and Migration - ZI-SecurityIncident' and contains three configuration sections:

- Email settings**: This section includes fields for 'From' (Internal email address), 'To', 'Subject', 'Names of attachments' (with a note: 'This name will be used to create file names such as dangerous_email.7z'), and a large text area for 'Content'.
- Archive password settings**: This section includes a checkbox for 'Password is the current date' (checked), a 'Date format' field (set to 'yyyyMMdd'), and a 'Static password' field (set to 'password').
- System for generating message preview**: This section includes four checkboxes: 'Generate secure message preview' (checked), 'Delete unsafe code from preview' (unchecked, with a note: 'e.g. executable scripts'), 'Display images from external sources' (checked), and 'Display images already processed by the system' (checked).

Email settings

- **From** - sender of the notification email
- **To** - recipient of the notification email
- **Subject** - subject of the notification email
- **Names of attachments** - names of the unsafe attachments
- **Content** - content of the message

Archive password settings

- **Password is the current date** - password of the zipped attachment is the date of the received message
- **Date format**
- **Static password** - password of the zipped attachment when option **Password is the current date** is unchecked

System for generating message preview

- **Generate secure message preview** - if set, unsafe message is converted to pdf
- **Delete unsafe code from preview** - if set, unsafe code is removed from preview
- **Display images from external sources** - if set, images from external sources will be included in the processed message
- **Display images already processed by the system** - if set, images in message will be processed
